CBORD Updates Software For Healthcare

Ithaca, New York—The CBORD Group, Inc., a worldwide provider of food and nutrition services software, announced today that its Nutrition Service Suite software has now been updated for Healthcare clients. The tools offered by the Nutrition Service Suite are comprehensive, fully integrated, and easy to use.

“Healthcare professionals face increasing pressure to improve patient satisfaction while controlling costs,” said Rich Higgins, National Market Manager for Healthcare. “Upgrading operations to accomplish these goals has never been easier or more effective. The Nutrition Service Suite delivers results.”

Updated components can be implemented without compromising the efficiency of fully integrated systems. CBORD’s solutions are revolutionary in delivering advanced capabilities that are easy to implement and use. The enhanced room service module supports on-demand foodservice, which provides the highest level of responsiveness to patients, and directly impacts patient satisfaction. CBORD has also increased the clinical support delivered by the dietary systems by adding intake analysis, a streamlined process that allows staff to focus on direct patient care activities. Additionally, the Nutrition Service Suite offers advanced commissary support. The software provides efficient handling of raw and finished goods, inventories, product movement and associated costing and advanced production techniques.

Both small and large multi-site healthcare environments are now better served by CBORD’s complete dietary and food production automation support.

For more information about the Nutrition Service Suite, please contact Christine Curkendall, Sales Support Manager, at 607.257.2410.
